

**1. Q: Why I only saw 224MB memory installed in my K7VM2 system?**

**A:** The 32 MB for VGA will be shared from system memory. So if you install one 256 MB memory, the on board VGA will use 32 MB then your system can only use 224 MB memory.

**2. Q: If I want to use add-on AGP card on G Pro, do I need to change anything in the BIOS utility?**

**A:** When you were using on board VGA and want to switch to add-on VGA, you do not need to set anything in the BIOS. The BIOS will auto switch to add-on VGA if it is installed. Also the BIOS will auto switch back to on-board VGA if add-on VGA is not installed.
